

What's in a name?

Everything! especially when that name is synonymous with an industry standard for quality and performance. The long established Berkshire range of telephones has changed to meet the requirements of a new generation of customers.

Aesthetics and ergonomic design have played an integral part in the development of this new stylish product. Quality is maintained at the same high standard that you have come to expect from our Berkshire products.

The new range has a feature list that can rival the very best. All of the features inherent within the traditional Berkshire family, and many more, are now available in just four easy to select models

- pick one solution to meet your particular telephony needs.

The New *Berkshire*

atl telecom

Berkshire 200 ●●●●●●●●●●

The Berkshire 200 from ATL telecom is our new entry level business telephone that offers a host of benefits never before seen in this segment of the telecom marketplace. Its features are common throughout all four models of the new Berkshire range:

Whether for reasons of health and safety, or for simply keeping your hands free, the use of a headset is seen by many employers as a 'must have' requirement for its people. The headset port fitted as standard is compatible with all major brands of headset.

A modem port, allows quick and convenient connection when sharing your telephone line with a computer.

Also common with all new Berkshire models comes the choice of linecord connection. Two linecords arrive with each telephone for either the standard UK socket (BS6312) or CATEGORY 5 installations requiring RJ45 connections.

Don't keep your customers waiting! The Berkshire family of telephones can all be set to indicate the presence of a voicemail message waiting to be retrieved from your central switch.

Berkshire 400 ●●●●●●●●●●

When the modern business world demands greater time efficiency from your already busy schedule, use the ability of the Berkshire 400 to automatically dial your often used numbers direct from memory. A few simple keystrokes will allow you to store a maximum of twelve telephone numbers into permanent memory (no battery required).

Combine this memory with all the previously mentioned features of the Berkshire 200 and you have a fast, easy to use communication tool at your finger tips.

Berkshire 600 ●●●●●●●●●●

Increase the ease with which you manage calls still further and free up your hands with the Berkshire 600 speaker phone. If the occasional conference call is required, gather your colleagues around for maximum use of this popular feature.

Along with ergonomic call handling, the power of speed dialling from memory is doubled from the Berkshire 400 to 24 memory store locations.

Entry of these stored numbers is made even easier with the help of a display, which also provides you with time and date information.

For those customers that need to monitor their call time for reporting, the display offers this ability automatically the moment a call is made or received.

Finally, clear viewing of the display is assisted by a desk bracket shipped with the Berkshire 600 and 800, while at the same time providing comfortable access to the telephone buttons.

Berkshire 800 ●●●●●●●●●●

Our flagship model offers many of the features associated with a fully functional system phone, starting with Call Line Identity (CLI) to allow both name and number display of the caller. Great for allowing you to gather your thoughts, and paperwork, before answering that customer call, projecting the best possible image of you and your company.

Also, greater intelligence within the Berkshire 800 allows us to offer a directory, for storage of 100 name and number locations. No longer do you need to save details on bits of paper, put them where you need them most.

The provision of additional memory allows us to offer a list of the last 50 callers. This list includes the time and date of these calls, to help with any historic reporting or past number retrieval. If however, all you require is a simple redial feature, the Berkshire 800 also makes the most of this, with a permanent back-up list of the last five callers.

Lastly, all telephones within the new Berkshire range have hearing aid compatibility as standard. The Berkshire 800 however, also offers multiple volume levels to the handset, allowing you to tailor a setting to suit your speech and hearing requirements.
